

## **BalaBit Shell Control Box**

### Customer Reference: Leekie Enterprises Inc.

“THE MOST FASCINATING SOLUTION FOR AUDITING REMOTE SESSIONS”

Leekie Enterprises Inc. is an interactive gaming support/service provider for the online gaming industry. Needless to say, every element of an online gaming infrastructure – servers, databases, websites, and so on – must be secure, reliable and associated to someone responsible so that any error can be effortlessly traced back to its source. An important point in this scheme is overseeing and auditing remote access and server administration, which Leekie successfully solved using the BalaBit Shell Control Box.

Gaining control over remote system maintenance and configuration is essential for high-security production environments where every error or fraud can have a disastrous effect on the company – after all customers are extremely cautious about whom they trust with their money. As organizations managing all their IT assets in-house are becoming increasingly rare, auditing and reviewing the outsourced work is a must.

"In the online gaming industry, we handle a large amount of sensitive data: account information, gaming transactions, not including our internal data. We have strict access control policies, including control over remote system access, but we needed something more than just authorizing connections on a VPN server. Using SCB made it possible for us to gain control over the actions and activities of our administrators, instead of only the connections. This is an immense advantage when dealing with privileged access to our main servers and databases." says Ngadiman Sentosa, IT Manager at Leekie Enterprises Inc.

BalaBit was one of many vendors evaluated by Leekie for providing audit trails for encrypted remote sessions. "We chose BalaBit's Shell Control Box because it provides a complete audit trail solution at a lower TCO (Total Cost of Ownership) and BalaBit also has a highly skilled technical support team. BalaBit's team was very helpful in providing support and information about the product, both pre- and post-sales.", says Sentosa.

**"THE PRODUCT GIVES US PEACE OF MIND KNOWING THAT WE ARE DEPLOYING NOT ONLY A SOUND AND PROVEN AUDIT TRAIL SOLUTION FOR OUR REMOTE SESSIONS, BUT ONE THAT SAFEGUARDS OUR INFORMATION SECURITY."**

Leekie uses the Shell Control Box to control and audit all the remote desktop (RDP) and SSH sessions to their Windows and Linux/UNIX servers. General reviews about the activities and maintenance of the servers are really simple owing to the reports and indexed & searchable audit trails generated by SCB. If anything requires more detailed attention, the entire session can be replayed like a movie. "We are able to perform audit trails to encrypted remote sessions from one centralized box. It is easy to manage, so it increases the efficiency in auditing the remote sessions."

## About Leekie Enterprises Inc.
